

Microchip MCP3909 和 PIC18F85J90 单相电表参考设计电路

Microchip 公司的 MCP3909 是支持 IEC 62053 国际电表标准的电表 IC,具有 16 位双 ADC 输出数据格式,20 位乘法器输出数据格式,两通路的 SINAD 为 81dB,1000:1 动态范围的有用功率测量误差 0.1%,片内基准电压超低漂移 15 ppm/°C.本文介绍 MCP3909 主要特性,功能方框图以及采用 MC3909 和 PIC18F85J90 的单相电表参考设计电路图.

MCP3909 and PIC18F85J90 Single Phase Energy Meter Reference Design

Energy Metering IC with SPI Interface and Active Power Pulse Output

The MCP3909 device is an energy-metering IC designed to support the IEC 62053 international metering standard specification. It supplies a frequency output proportional to the average active real power, with simultaneous serial access to ADC channels and multiplier output data. This output waveform data is available at up to 14 kHz with 16-bit ADC output and 20-bit multiplier output words. The 16-bit, delta-sigma ADCs allow for a wide range of IB and IMAX currents and/or small shunt (<200 μOhms) meter designs. A no-load threshold block prevents any current creep measurements for the active power pulse outputs. The integrated on-chip voltage reference has an ultra-low temperature drift of 15 ppm per degree C.

This accurate energy metering IC with high field reliability is available in the industry standard 24-lead SSOP pinout.

MCP390 主要特性:

- Supports IEC 62053 International Energy Metering Specification and legacy IEC 1036/61036/687 Specifications
- Digital waveform data access through SPI interface
 - 16-bit Dual ADC output data words
 - 20-bit Multiplier output data word
- Dual functionality pins support serial interface access and simultaneous Active Power Pulse Output
- Two 16-bit second order delta-sigma Analog-to-Digital Converters (ADCs) with multi-bit DAC
 - 81 dB SINAD (typ.) both channels

- 0.1% typical active energy measurement error over 1000:1 dynamic range
- PGA for small signal inputs supports low value shunt current sensor
- Ultra-low drift on-chip reference: 15 ppm/°C (typical)
- Direct drive for electromagnetic mechanical counter and two-phase stepper motors
- Low IDD of 4 mA (maximum)
- Tamper output pin for negative power indication
- Industrial Temperature Range: -40°C to +85°C

MCP3909 and PIC18F85J90 Single Phase Energy Meter Reference Design

The MCP3909/PIC18F85J90 Single Phase Energy Meter Reference Design is a fully functional single phase meter. The design is intended to be low cost and is transformerless. The design uses a half-wave rectified power supply circuit and a shunt current sensing element. A single MCP3909

acts as the analog front end measurement circuitry. The PIC18F85J90 directly drives the LCD glass and displays active energy consumption.

The meter design contains serially accessible registers and is intended to be flexible and upgraded to a variety of PIC® micro-based energy meter designs using the firmware presented herein. The “Single Phase Energy Meter Software” offers a functional and simple means to monitor and control the PIC18F85J90 and can be used to create custom calibration setups. In some situations, only a single point calibrator may be required. The energy meter software offers an automated step by step calibration process that can be used to quickly calibrate energy meters.
