

GPON ONU Optical Transceiver SFF Module

RTXM167-407

Features

- *Integrated Single fiber bi-directional optical subassembly*
- *1310nm DFB laser Burst-mode Transmitter and 1490nm APD Continuous receiver(with WDM)*
- *SFF 2×10 metallic package*
- *+3.3V single power supply*
- *Low power consumption*
- *0 to 70°C operating case temperature*
- *LVPECL compatible data input*
- *CML compatible data output*
- *LVTTL transmitter burst mode control*
- *Burst Enable: L-active*
- *LVTTL receiver signal-detected indication*
- *Class 1 Laser eye safety*
- *Excellent EMI and EMC characteristics*
- *DDM Function implemented*
- *Compliant with RoHs&WEEE*

Applications

- *Optical transceiver for Gigabit-capable Passive Optical Networks (GPON) ONU side*

Standards

- *ITU-T G.984.2 Class B+*
- *Small Form Factor Transceiver Multisource Agreement July 5, 2000*
- *Compliant with SFF-8472 v9.5*

Description

The GPON ONU Transceiver is designed for Gigabit-capable Passive Optical Network (GPON) transmission. The module incorporates 1310nm burst-mode transmitter and 1490nm continuous-mode receiver.

The transmitter section uses a 1310nm DFB laser and an integrated BM laser driver which is designed to perform very small burst enable/disable delay time. The laser driver also includes digital APC and temperature compensation circuit, which are used for keeping the launch optical power and extinction ratio constant over temperature and aging.

The receiver section uses an integrated 1490nm APD photodiode and preamplifier mounted together. It has the function that indicates receiver signal-detected status (active high).

An integrated WDM coupler can separate 1490nm input light and 1310nm output light.

The metallic package guarantees excellent EMI and EMC characteristics, which totally comply with international relevant standards.

Absolute Maximum Ratings

Parameter	Symbol	Unit	Min	Max
Operating Case Temperature Range	T _c	°C	0	70
Storage Temperature Range	T _s	°C	-40	85
Relative Humidity	RH	%	5	95

248-255	8	Vendor Specific	Don't Access

The measured values located at bytes 96-105 (in the 2 wire address 0xA2) are raw A/D values (16-bit integers) of transceiver temperature, supply voltage, laser bias current, laser optical output power and received power. All the measured values are "Externally Calibrated", and then it is necessary to convert raw A/D values to real world units by the manner as shown in Table 3.1.

Table 3.1 Real Time Diagnostic Monitor Values

Byte Name	Description
96 Temperature MSB	Internally measured transceiver temperature. Compliant with External Calibration of SFF-8472.
97 Temperature LSB	
98 Vcc MSB	Internally measured supply voltage. Compliant with External Calibration of SFF-8472.
99 Vcc LSB	
100 Laser Bias MSB	Measured Laser bias current. Compliant with External Calibration of SFF-8472.
101 Laser Bias LSB	
102 Tx Power MSB	Measured Tx power. Compliant with External Calibration of SFF-8472.
103 Tx Power LSB	
104 Rx Power MSB	Measured Tx power. Compliant with External Calibration of SFF-8472.
105 Rx Power LSB	

This transceiver implements two optional status bytes, "Logic States" at byte 110(0xA2)" and "A/D Updated" at byte 111(0xA2) as shown in Table 3.2. "A/D Updated" status bits allow the user to verify if an update from the analog-digital conversion has occurred of the measured values, temperature, Vcc, laser bias, Tx power and Rx power. The user writes the byte to 0x00. Once a conversion is completed for a given value, its bit will change to '1'.

Table 3.2 Logic Status and AD Conversion Updates

Byte	Bit	Name	Description
110	7	Reserved	.
110	6	Soft Tx Disable Control	1= disable, 0= enable.

110	5	Reserved	Set to 0.
110	4	Rx Rate Select State	Not supported (set to 0).
110	3	Soft Rate Select Control	Not supported (set to 0).
110	2	Tx Fault	Not supported (set to 0).
110	1	LOS	Not supported (set to 0).
110	0	Power on Logic	Not supported (set to 0).
111	7-0	Temp A/D Valid	Set to 0.

Each of the measured values has a corresponding high alarm, low alarm, high warning and low warning threshold level at location 00-39(x0A2) written as the data format of a corresponding valued shown in Table 3.3. Alarm and warning flags at bytes 112-119(0xA2) are defined as follows.

- (1) Alarm flags indicate conditions likely to result (or have resulted) in link failure and cause for immediate action.
- (2) Warning flags indicate conditions outside the guaranteed operating specification of transceiver but not necessarily causes of immediate link failures.

Table 3.3 Alarm and Warning Flags

Byte	Bit(s)	Name	Description
112	7	Temperature High Alarm	Set when temperature monitor value exceeds high alarm level.
112	6	Temperature Low Alarm	Set when temperature monitor value exceeds low alarm level.
112	5	Vcc High Alarm	Set when Vcc monitor value exceeds high alarm level.
112	4	Vcc Low Alarm	Set when Vcc monitor value exceeds Low alarm level.
112	3	Laser Bias High Alarm	Set when laser bias monitor value exceeds high alarm level.
112	2	Laser Bias Low Alarm	Set when laser bias monitor value exceeds low alarm level.
112	1	Tx Power High Alarm	Set when Tx power monitor value exceeds high alarm level
112	0	Tx Power Low Alarm	Set when Tx power monitor value exceeds low alarm level.
